**Expert
At Disentangling**

STAER disentangles combine the action of a mechanical system and a timed pneumatic propulsion system. The springs can be evacuated in flexible plastic tubes to the distribution station, with automatic buffer stock management at the unscrambler's multiple outlets, on conveyors or vibrating rails.

EXPLORE ITS PERFORMANCES

The system allows springs to be evacuated into plastic tubes.

The springs can be distributed to various outlets on rails or belts.

The detangler easily handles small, medium and large springs.
